**Reflections on Bioethics**-Jose Antonio Morales-Gonzalez 2018-06-27 The book Reflections on Bioethics is an effort that brings together works grouped into five sections: "Bioethics and Health", "Bioethics and Education", "Bioethics and Technology", "Bioethics in the Use of Experimental Animals",and "Selected Topics of Bioethics". In each of these sections, the fundamental concepts of bioethics and their relationship with each of these branches of knowledge are covered. The purpose is to give the reader a specific document of topics, it is not intended to be a treaty because the study of any of the five sections is very broad. However, this is an effort that manages to combine in interdisciplinary subjects that are fundamental for professionals of all fields of knowledge.

**Teaching and Learning in Nursing**-Gregor Stiglic 2017-05-17 A significant body of knowledge is the basis for a holistic, caring and scientific evidence-based nursing education in practice for professional development. Quality teaching leads to good learning and both aspects are two of the main issues of quality assurance in nursing education today. To begin with, not all nursing students have the same levels of motivation or learning abilities. It is with cognisance of providing quality care for patients that the role of the nurse educator has to be to enhance nursing students' learning using scientific evidence based teaching. Research around teaching and learning processes is an important part of the delivery of quality education, which in turn impacts on students' learning results and experiences, thereby, ensuring holistic biopsychosocial care to patients. The main aim of teaching and learning in nursing, at all levels, is to enhance the nurses' contribution to assist the individuals, families and communities in promoting and preserving health, well-being and to efficiently respond to illnesses. We hope that this book can be used as a resource to increase the body of knowledge in teaching and learning in nursing, thereby enhancing the role and contribution of health care professionals to clinical practice.

**Ethical Competence in Nursing Practice**-Dr. Catherine Robichaux, PhD, RN, CCRN, CNS 2016-09-07 This is a unique, innovative professional nursing ethics textbook designed specifically for all practicing nurses and to meet the educational needs of all nursing students, including RN to BSN and RN to MSN students. Written by experts in the field, it discusses ethical concepts relevant to the registered nurse who has practiced for several years but is learning higher level concepts and applications. This text addresses different areas of professional practice and is rich with case studies illustrating the need for ethical competence and decision making. The book fulfills the necessary criteria for the AACN Essentials for Baccalaureate Education and the QSEN and IOM competencies. It also integrates relevant provisions and statements from the revised Code for Nurses (ANA, 2015). Clear and concise, the text relates content to the nurse's current practice and introduces a framework for the development of ethical competence, from recognition of an ethical situation to implementation of a justifiable action. A decision-making model that includes elements of care and virtue ethics is also included. Essential communication and conflict skills are addressed, in addition to the role of the ethics committee and ethics consultation. The book discusses common ethical issues likely to be encountered, how to recognize and address moral distress, and ethical practice as it relates to research, quality, and safety. Case studies that incorporate evidence-informed research provide the opportunity to develop ethical skills and apply decisionmaking principles. Relevant QSEN competencies and provisions and statements from the ANA's revised Code for Nurses (2015) are featured in each chapter. Interactive exercises and questions and PowerPoints provide further opportunity for critical thinking. KEY FEATURES: Addresses the specific needs of practicing nurses and students in the RN to BSN and RN to MSN courses Fulfills AACN Essentials, IOM competencies, and QSEN KSAs Integrates relevant provisions and statements from the revised Code for Nurses (ANA, 2015) Builds upon previous practice experience Discusses ethical competence in a variety of practice environments Includes case studies to apply ethical competencies

It also introduces more advanced skills that students will need as the course progresses, such as research and evidence based practice. It shows how to use these important skills to succeed both at university and as a registered nurse.

**Communication in Palliative Nursing**-Elaine Wittenberg 2020-01-23 "The first edition of Communication in Palliative Nursing was published in 2012 and became the market leader for nurses wanting to learn more about how to improve and teach palliative care communication. For the last 8 years, it has remained the only text solely focused on the vital role of nurses in palliative care. During this time, the COMFORT model was taught to nurses nationwide who brought the curriculum back to their own institutions and taught components of the model to more than 10,000 healthcare providers across the United States (Wittenberg, Ferrell, Goldsmith, Ragan,

& Buller, 2017). Numerous journal articles and research studies have been produced to highlight the principle components of the COMFORT model and test its effectiveness among healthcare audiences across a variety of clinical and educational settings. Through this all, as the model was disseminated to clinical audiences of bedside nurses, nurse leaders, nursing students, and interprofessional learners, feedback was captured about COMFORT. Comments revealed major components of the model that were working and weren't working for the nurses and other healthcare providers who utilized the strategies with patients and families, and began using curriculum tools for teaching and integrating palliative care communication instruction. So, much like the model's grounding in a transactional communication approach, which relies on the co-created interaction between parties, it was clear that the COMFORT model was also ebbing and flowing and had to change. More importantly, palliative care has been growing, changing, expanding, and becoming more sophisticated, more wide-spread! Now more than ever before, palliative care is provided in the home, clinic, or inpatient setting and serves patients who are seriously or chronically ill and their families. It became evident that in order to continue improvements to the model and to keep up with the changing landscape of palliative care and palliative patient populations, a new edition was necessary. Before we highlight the changes, it is never too early to overstate our steadfast commitment to the following principles: We believe that communication research and theory can shape palliative care practices, providing tools for a variety of contexts. We believe that palliative care, offering compassionate, holistic treatment for patients and their families, will not be possible without caring for the entire person (body and mind). We believe that communicating about palliative care must begin at diagnosis of serious illness, not just at end-stages. We believe in a patient-centered approach to communication that emphasizes the role of the family caregiver in the illness trajectory. We believe that intentional communication emphasizing team processes among physicians, nurses, social workers, chaplains, and other healthcare professionals improves palliative care practice. We believe that palliative care should be introduced early in the communication education of all health professionals. We believe that education about palliative care and communication must extend to patients and families who can then advocate for and partner more productively in such services. We believe that communication with the family caregiver is essential for the treatment of pain and symptom management. We believe that frequent conversations are needed across the disease/care trajectory, as patients and families encounter ongoing points of decision-making"--

**Culture, Communication and Nursing**-Philip Burnard 2014-01-14 Good communication is an essential part of delivering effective nursing care. Nursing students work in a variety of multicultural settings and therefore it is imperative that they fully understand their own cultural context and that of others. This text illustrates the important differences between cultures and how these differences can enhance practical nursing. Through the comprehensive use of case studies and interactive exercises, the book invites students to reflect on their own knowledge and skills about culture so that they can learn to communicate in a more effective and culturally sensitive way. All theory is applied to nursing practice to demonstrate how situations can arise and be dealt with appropriately whilst working on clinical placement. This text is written for students studying the CFP at Year 1. Communication will be studied either as part of a Professional Issues module, or Nursing Practice.

**NURSING CARE AT THE END OF LIFE**-SUSAN. LOWEY 2019

**Transitions to Professional Nursing Practice**-Jamie Murphy 2020-06-22

**How To Break Bad News**-Robert Buckman 1992-08-08 For many health care professionals and social service providers, the hardest part of the job is breaking bad news. The news may be about a condition that is life-threatening (such as cancer or AIDS), disabling (such as multiple sclerosis or rheumatoid arthritis), or embarrassing (such as genital herpes). To date medical education has done little to train practitioners in coping with such situations. With this guide Robert Buckman and Yvonne Kason provide help. Using plain, intelligible language they outline the basic principles of breaking bad new and present a technique, or protocol, that can be easily learned. It draws on listening and interviewing skills that consider such factors as how much the patient knows and/or wants to know; how to identify the patient's agenda and understanding, and how to respond to his or her feelings about the information. They also discuss reactions of family and friends and of other members of the health care team. Based on Buckman's award-winning training videos and Kason's courses on interviewing skills for medical students, this volume is an indispensable aid for doctors, nurses, psychotherapists, social workers, and all those in related fields.

**The Future of Nursing**-Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly

to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

**Communication Skills for Nurses**-Marilyn Edwards 2014-11-19 Over a third of all consultations in general practice are now conducted by nurses. The consultation is the key element of primary care, with patients being more satisfied with the care given by clinicians who have good communication skills. Poor communication or

dissatisfaction with a consultation is reported to be one reason why patients decide not to attend or do not take a prescribed treatment. Patients need to be satisfied with the consultation, understand their condition and understand the reasons for their treatment or management plan. This book has been written to reinforce good consultation and communication skills and highlights areas where readers might wish to review and improve their own consultation techniques. This is done through case studies and scenarios that are likely to be common in many practices. Although the text and scenarios relate to practice nurse consultations, the content can be transferred to all primary care nursing settings.
